# US Strategy Weekly A Three-stock Rally?

Apple, Inc. (AAPL - \$207.15) shares jumped over 7% to a record high after announcing that later this year the "Apple Intelligence" platform – its foray into the generative AI space -- will be integrated across the company's hardware and software products using M1 chips or higher. Apple's surge lifted the S&P 500 and Nasdaq to new highs and boosted Apple's market capitalization by \$215 billion to \$3.18 trillion. According to Dow Jones Market Data, this was the third-largest one-day market cap surge in history, and it also made AAPL the second-largest stock in the S&P 500. Apple is now second only to Microsoft Corp. (MSFT - \$432.68) with a market cap of \$3.22 trillion. Nvidia Corp. (NVDA - \$120.91) is currently in third place with a market cap of \$2.97 trillion. Together, these three stocks now represent 21% of the S&P 500's \$44.3 trillion market cap. The concentration of performance continues to narrow.

Apple was not the only news of the day. Stocks were also supported by bonds after a solid \$39 billion Treasury sale triggered speculation that this week's CPI reading may help build the case for the Federal Reserve to cut rates later this year. Demand in the auction of 10-year debt was strong, with the bid-to-cover ratio of 2.67, the highest since February 2022, or prior to the start of the Fed's tightening cycle. Treasuries were also seen as a safe haven vehicle given the current political upheaval in Europe. French stocks and bonds were rattled this week after French President Emmanuel Macron's political party suffered a defeat in the European Parliament election over the weekend. Macron called for a snap parliamentary election that will take place in two rounds concluding on July 7. Macron was not the only European leader to see this weekend's election results shift power to the conservative right, but the political risk of a snap election in France resulted in a sell-off in French banking stocks and sovereign bonds. To make matters worse, S&P Global Ratings had downgraded France last week. In sum, US Treasuries became the beneficiaries of European turmoil.

In the US, a survey conducted by 22V Research showed that most investors are betting that both the consumer price index and the Fed decision will be "risk on" events. According to the median estimate in a Bloomberg survey, 41% plurality of economists expect the Fed to signal two cuts in the closely watched "dot plot," while an equal number expect the forecasts to show just one or no cuts at all. We would put ourselves in the latter category. Inflation has not been tamed, in our view, and the economy is showing both strength and weakness, which should give the Fed pause until a clearer trend appears.

It was a busy week for economic releases. The NFIB small business optimism index rose 0.8 points to 90.5, the highest level since December. Job openings, hiring plans, capex plans, and plans to raise prices all rose, while most other components fell. The uncertainty index jumped 7 points to 85, the highest since November 2020. Actual earnings, sales, sales expectations, inventory satisfaction, and inventory plans all fell in May. It was confusing to see hiring and capex plans increase as earnings and sales declined. See page 3.

Similarly, May's ISM indices showed a mixed picture. The manufacturing index fell to 48.7, the 18th reading below 50 in the last 19 months. The nonmanufacturing index rose to 53.8, up nicely from its For important disclosures and analyst certification please refer to the last page of this report.

first reading below 50 since December 2022. Business activity fell to 50.2 for manufacturing but jumped to 61.2 for nonmanufacturing, the highest since November 2022. Ironically, employment rose to 51.1 for manufacturing, one of the highest readings in 2 years, while nonmanufacturing employment also rose, but remained below 50 at 47.1. See page 4.

The employment report for May was far better than expected, showing a gain of 272,000 new jobs, and previous months were revised down by only 15,000. Our concern is the discrepancy between the household and establishment surveys. The establishment survey shows job growth of 1.8% YOY in April and May, better than the long-term average of 1.69% YOY. However, the household survey shows near-zero job growth of 0.3% YOY in April and 0.2% YOY in May. This survey is important since a negative annual growth rate in total jobs has historically been a key indicator of a recession. Moreover, the household survey showed a decline in employment, a decline in the civilian labor force, and an increase in those unemployed in May. These numbers help explain why the unemployment rate rose from 3.9% to 4.0% in May. See page 5.

Average hourly earnings rose 4.2% YOY in May, up from 4.1% YOY in April. This gives the impression of accelerating wage growth. But, after adjusting for inflation, average hourly earnings rose 0.74% YOY, just slightly better than the 0.70% recorded in April. See page 6. Total private weekly earnings were \$1197.41 in May, up 3.8% YOY; while production and non-supervisory weekly earnings averaged \$1013.66, up 4.2% YOY. However, if indexed to inflation, average real weekly earnings for non-supervisory workers rose 0.7% YOY and were down 3% from the May 2020 cyclical peak. See page 7. In short, due to inflation, the purchasing power of households has been declining for the last four years.

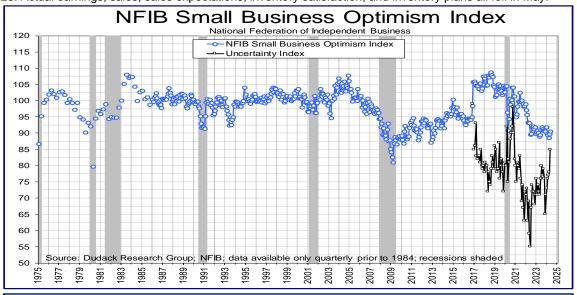

On page 8, an overlay of the growth rate of inflation and average weekly earnings helps display when, and how much, inflation eats into earnings. This chart also shows that when inflation has been higher than wage growth for a period of time (like it was for all of 2022), a recession follows. This is logical since inflation is negative for consumption. But, in this cycle, a variety of fiscal stimulus programs has compensated for falling real wages and prevented a recession. One positive sign for the economy is that average weekly hours, which have been declining since the post-pandemic spike, have begun to slowly increase in recent months. See page 8.

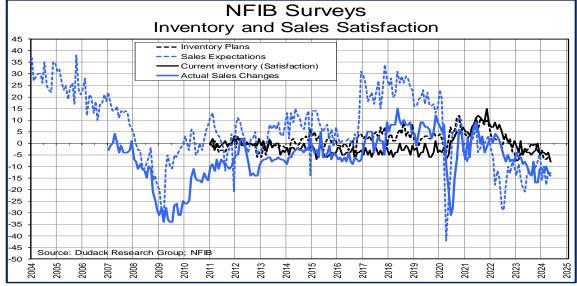

The Federal Reserve is not expected to change its policy this week, but the inflation data released for May could have an impact on both future Fed policy and the stock market. While many inflation benchmarks have generally been decelerating, recent data has been mixed. We are less optimistic than most about rate cuts because in past tightening cycles the Fed has increased rates until the real fed funds rate reached a minimum of 400 basis points. The recent peak in the current cycle was 270 basis points in April. This may not be enough to beat inflation. See page 9.

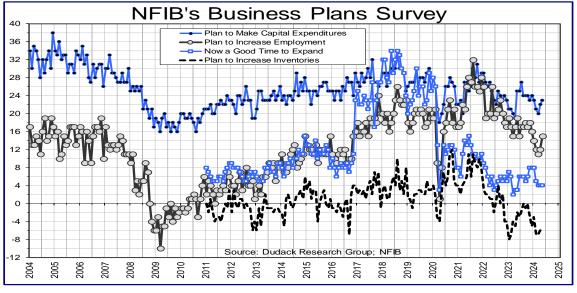

Several other factors concern us. After the June 2022 CPI peak, what dampened inflation was the fact that energy prices were falling for most of 2023 and were negative on a year-over-year basis. But even with Biden's recent release of oil from the strategic oil reserve, WTI prices remain firm, and the price of oil was up over 13% YOY in May and up nearly 11% YOY in June, to date. This could be a hurdle for inflation in the coming months. Many economists still suggest CPI would be at 2% or lower if owners' equivalent rent was excluded. This is simply not true. The CPI index less shelter and the index less food and shelter have been trending higher for the last 12 months. This debunks the theory that owners' equivalent rent is driving inflation this year. See page 10.

There was little change in technical indicators this week. The S&P 500 and the Nasdaq Composite made new highs this week. The Dow Jones Industrial Average made a record high on May 17, 2024. The Russell 2000 index remains 17% below its high of 2442.74 made on November 8, 2021. Both the Russell and the DJIA are trading below their 50-day and 100-day moving averages this week. See page 13. The 25-day up/down volume oscillator remains close to zero, a sign that volume in advancing stocks has been equal to volume in declining stocks. See page 14.

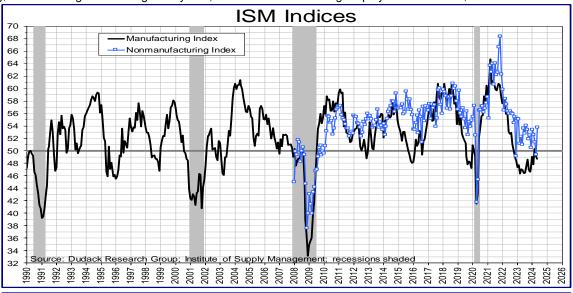

The NFIB small business optimism index rose 0.8 points to 90.5, the highest level since December. Job openings, hiring plans, capex plans, and plans to raise prices all rose, while most other components fell. The uncertainty index jumped 7 points to 85, the highest since November 2020. Actual earnings, sales, sales expectations, inventory satisfaction, and inventory plans all fell in May.

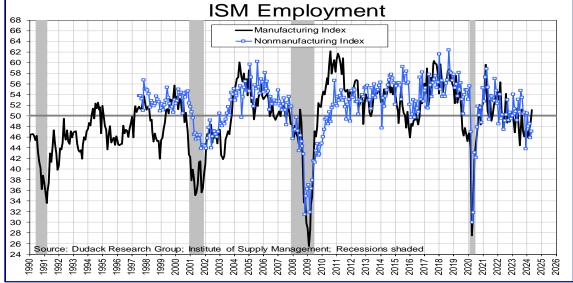

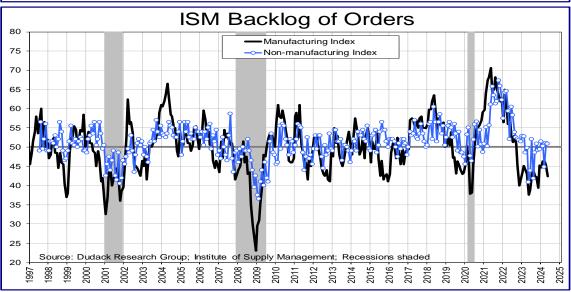

May's ISM indices showed a similar mixed picture. The manufacturing index fell to 48.7, the 18<sup>th</sup> reading below 50 in the last 19 months. The nonmanufacturing index rose to 53.8, up nicely from its first reading below 50 since December 2022. Business activity fell to 50.2 for manufacturing but jumped to 61.2 for nonmanufacturing, the highest since November 2022. Ironically, employment rose to 51.1 for manufacturing, one of the highest readings in 2 years, while nonmanufacturing employment also rose, but remained below 50 at 47.1.

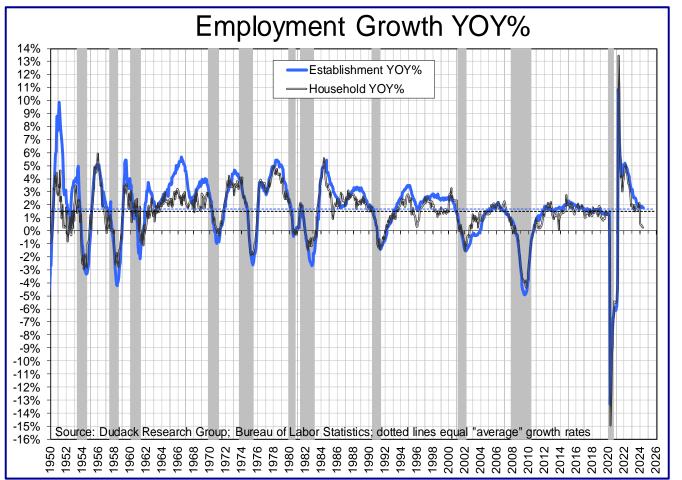

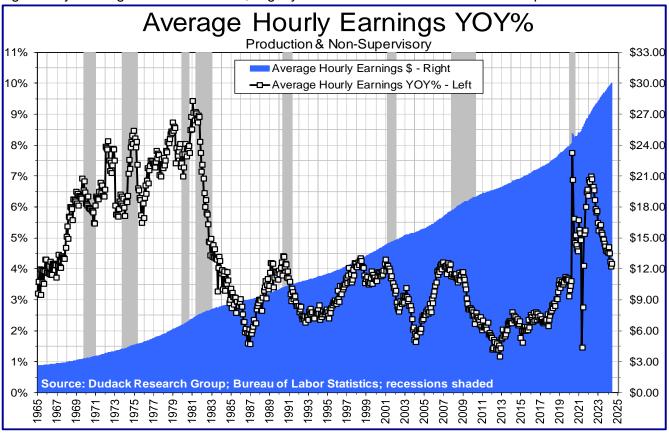

The employment report for May was far better than expected, showing a gain of 272,000 new jobs. Previous months were revised down by 15,000. More importantly, a significant discrepancy has materialized between the household and establishment surveys. On a year-over-year basis, the establishment survey shows job growth was 1.8% in April and May, better than the long-term average of 1.69%. Conversely, the household survey shows job growth near zero, at 0.3% YOY in April and 0.2% YOY in May. This near-zero growth rate is important since a negative annual growth rate in employment has been a key indicator of a recession. Note that the household survey also showed a decline in employment, a decline in the civilian labor force, and an increase in those unemployed in May. This explains why the unemployment rate rose from 3.9% to 4.0% in May.

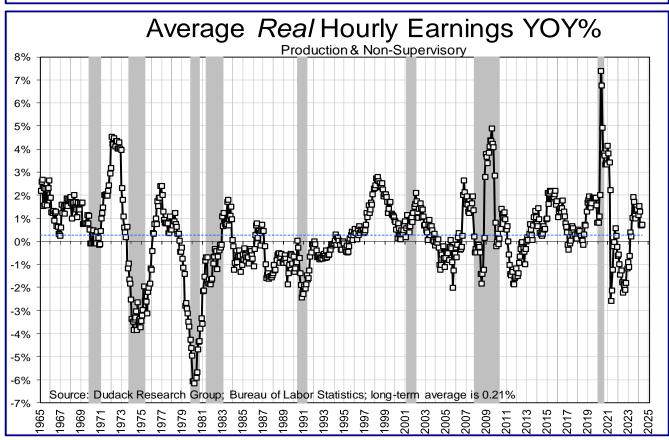

Employment Surveys (1,000s SA)	May-24	Apr-24	Change	May-23	Yr/Yr
Establishment Survey: NonFarm Payrolls	158,543	158,271	272	155,787	2,756
Household Survey Data (1,000s)					
Employed (A)	161,083	161,491	(408)	160,707	376
Unemployed (B)	6,649	6,492	157	6,117	532
Civilian labor force [A+B]	167,732	167,983	(251)	166,824	908
Unemployment rate [B/(A+B)]	3.96%	3.86%	0.10%	3.7%	0.3%
U6 Unemployment rate	7.4%	7.4%	0.0%	6.8%	0.6%
Civilian noninstitutional population (C)	268,248	268,066	182	266,618	1,630
Participation rate [(A+B)/C]	62.5	62.7	-0.2	62.6	-0.1
Employment-population ratio [A/C]	60.1	60.2	-0.1	60.3	-0.2

Average hourly earnings rose 4.2% YOY in May, up from 4.1% YOY in April. After adjusting for inflation of 3.4%, average hourly earnings rose 0.74% YOY, slightly better than the 0.70% recorded in April.

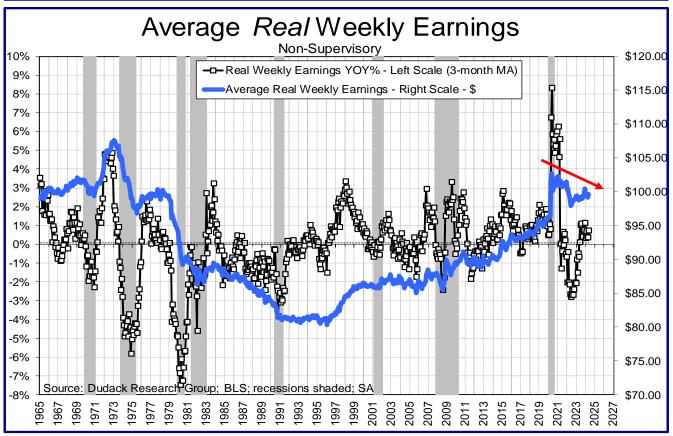

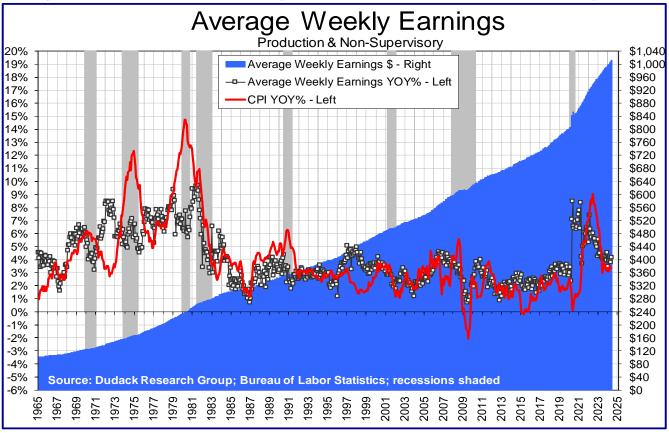

Total private weekly earnings were \$1197.41 in May, up 3.8% YOY. Average weekly earnings for production and non-supervisory workers were \$1013.66, up 4.2% YOY. However, when indexed to inflation, average real weekly earnings for non-supervisory workers were \$99.60, up 0.7% YOY, but down from the May 2020 cyclical peak of \$102.70. In short, due to inflation, the purchasing power of households has been declining for the last four years.

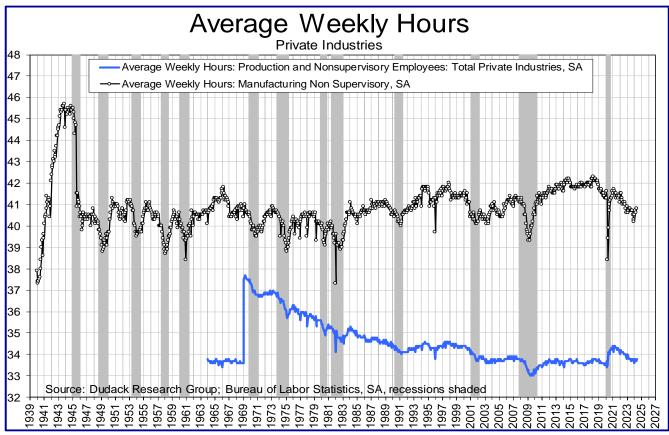

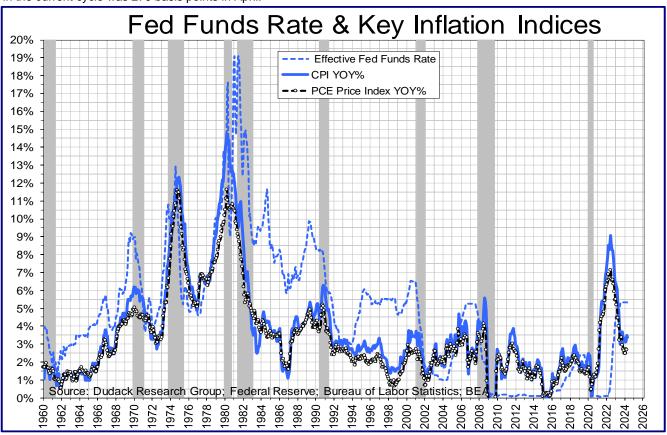

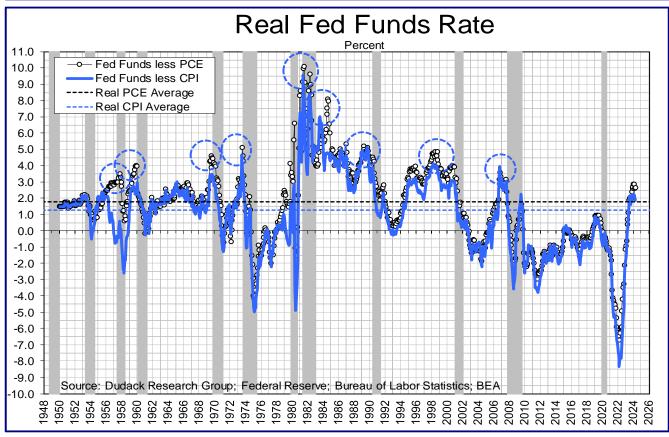

Overlaying the YOY trend of the CPI on the YOY trend in average weekly earnings displays how inflation eats into earnings. Moreover, when inflation has been higher than wage growth for a period of time, it usually results in a recession since inflation is negative for consumption. But, in this cycle, a variety of fiscal stimulus programs has prevented a recession. Average weekly hours for workers have been declining since the post-pandemic spike but have begun to slowly increase in recent months. This is a positive sign for the economy.

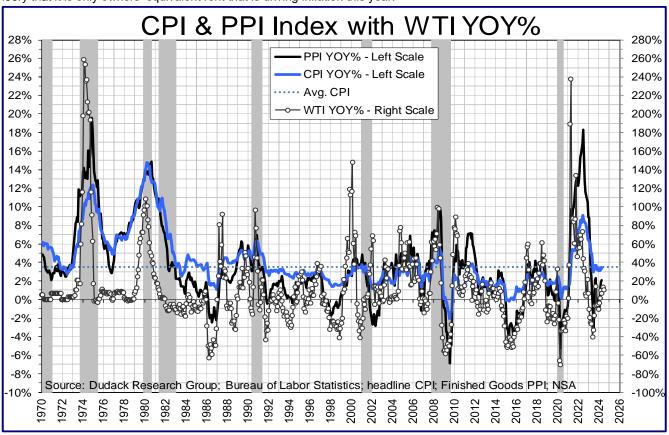

The Federal Reserve is not expected to change its policy this week, but the inflation data released for May could have an impact on both future policy and the stock market. Although inflation has been declining, recent data has shown prices stalling at current levels. Moreover, in past tightening cycles the Fed has increased rates until the real fed funds rate reached a minimum of 400 basis points. The recent peak in the current cycle was 270 basis points in April.

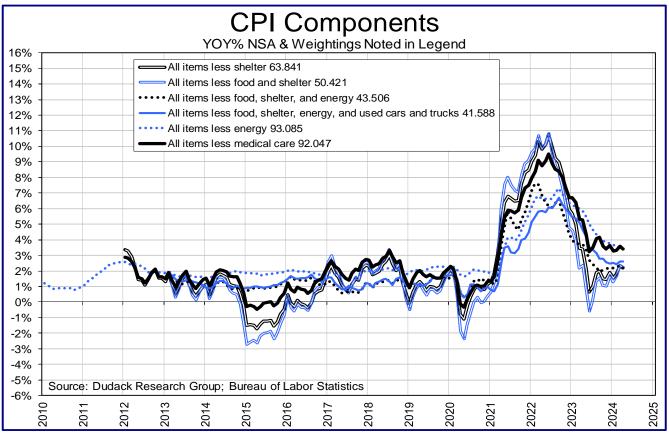

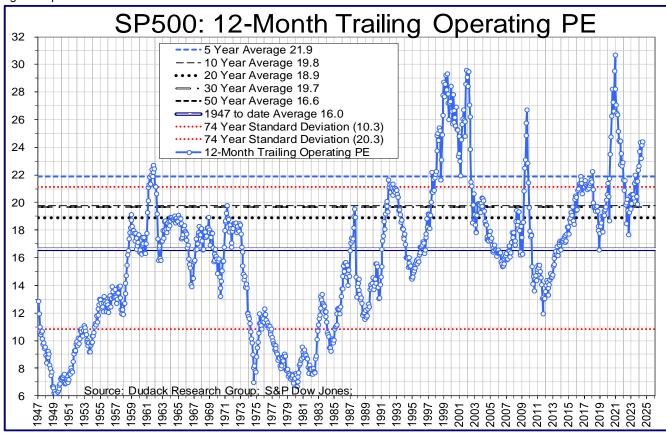

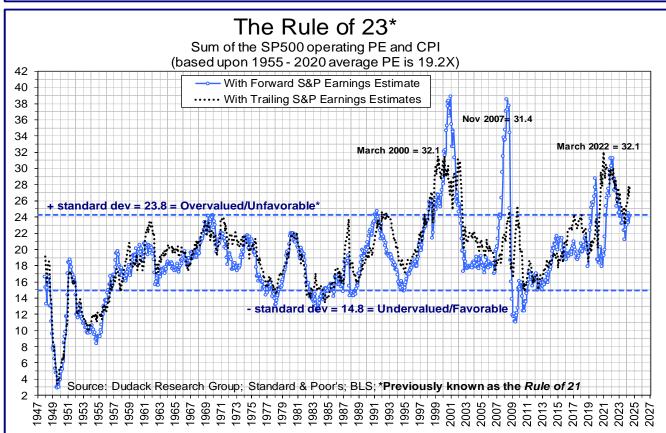

There are several things that concern us regarding inflation. First is the price of oil which was up 13% YOY in May. Lower energy prices for all of 2023 were what helped dampen inflation since the June 2022 peak. But even with Biden's release of oil from the strategic oil reserve prices remain firm. And CPI less shelter and less food and shelter has been trending higher over the last 12 months, debunking the theory that it is only owners' equivalent rent that is driving inflation this year.

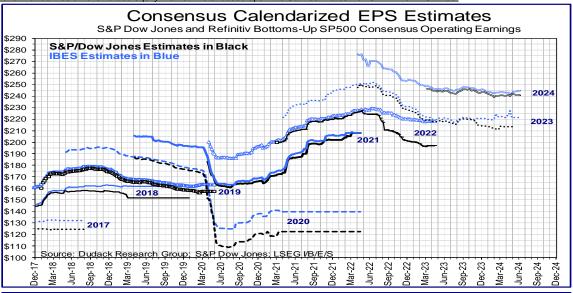

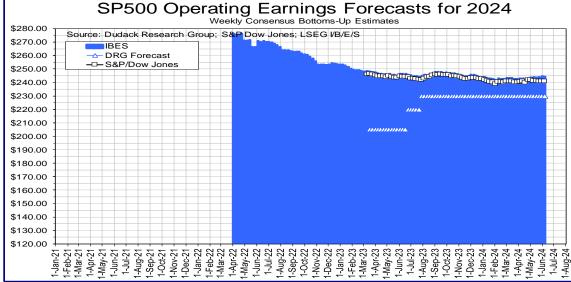

The SPX **trailing** 4-quarter operating multiple is now 24.5 times and well above all long- and short-term averages. The **12-month forward** PE multiple is 20.8 times and when added to inflation of 3.4% sums to 24.2, and above the top of the normal range of 23.8. By all measures, the equity market is at valuations seen only during the 1997-2000 bubble, the financial crisis of 2008, or the post-COVID-19 earnings slump.

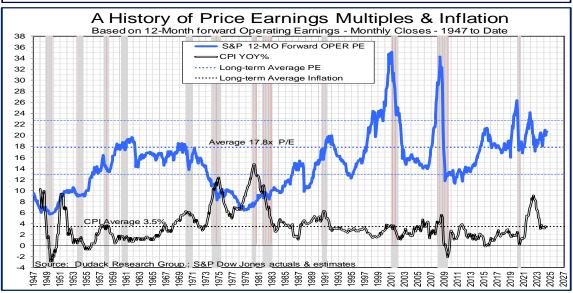

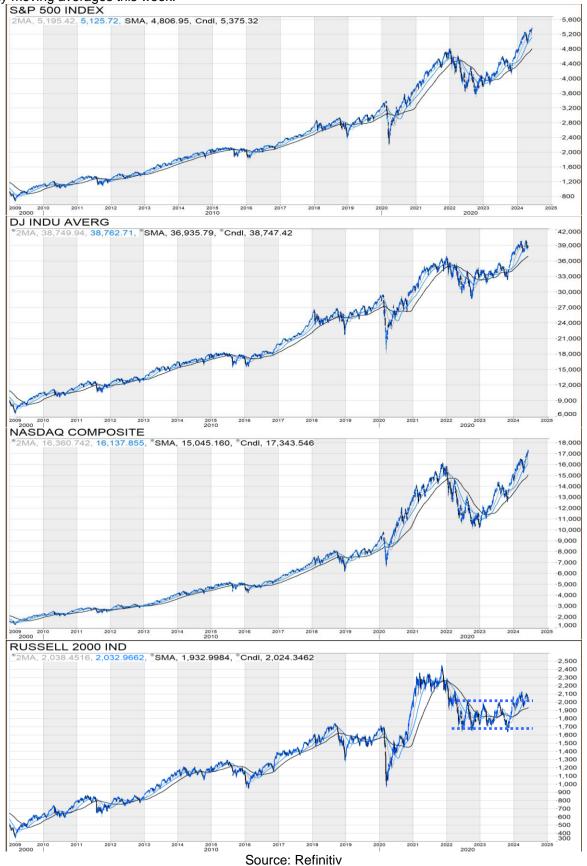

The S&P Dow Jones consensus estimate for calendar 2024 is \$240.86, down \$0.16, and the 2025 estimate is \$276.19, down \$0.31 this week, as optimism about next year's earnings cools. The LSEG IBES estimate for 2024 is \$244.65, down \$0.03 and for 2025 is \$279.41, down \$0.26. The IBES guesstimate for 2026 EPS continues to rise, up \$0.45 to \$315.26 this week. Based upon the IBES EPS estimate for calendar 2024, equities remain overvalued with a PE of 22.0 times and inflation of 3.4%. This sum of 25.4 is above the 23.8 level that defines an overvalued equity market. Note: based upon the S&P estimate, the 2024 PE is 22.3 times.

The Nasdaq Composite index and the S&P 500 made record highs on June 11, 2024, led by a 7.25% gain in Apple, Inc. (AAPL -\$207.15). The Dow Jones Industrial Average made a record high on May 17, 2024. The Russell 2000 index remains 17% below its high of 2442.74 made on November 8, 2021. Both the Russell and the DJIA are trading below their 50-day and 100-day moving averages this week.

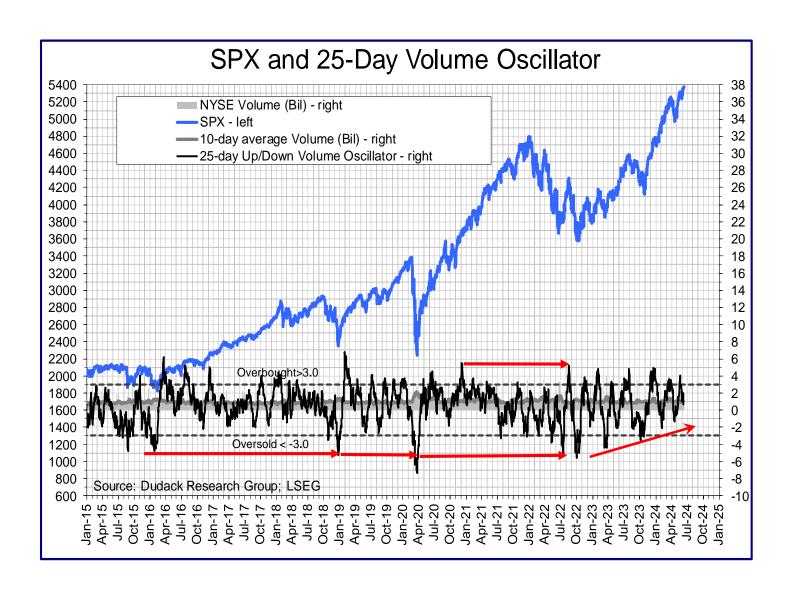

The 25-day up/down volume oscillator is at 0.66 and neutral after being in overbought territory for four consecutive trading days between May 17 and May 22. This followed six weeks in neutral territory. Since a minimum of five consecutive trading days in overbought is required to confirm a new high, this indicator has not yet confirmed any of the new highs made in the S&P 500 index and Dow Jones Industrial Average since January.

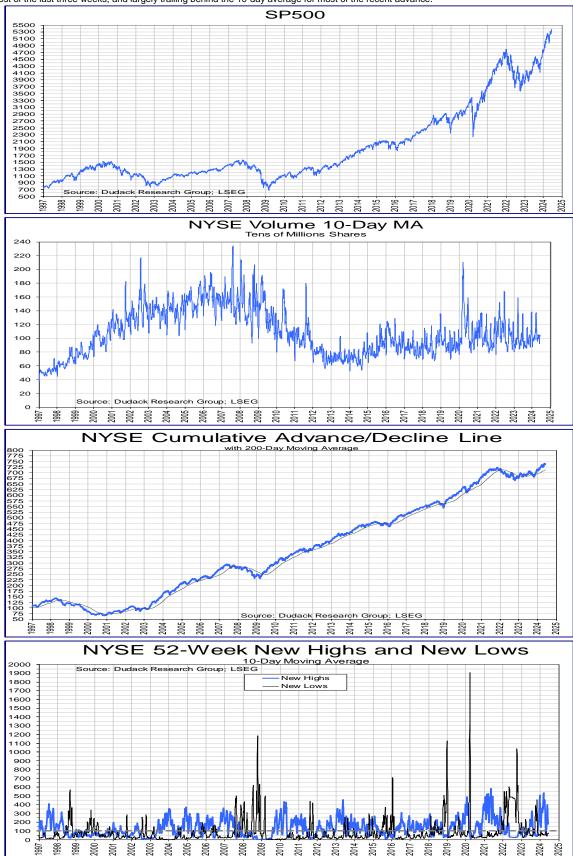

Previous overbought readings in the oscillator were seen for two consecutive days on March 13 and 14, on March 20 and 21, and for three consecutive trading days on March 27, March 28, and April 1. These overbought readings followed the string in early January when the oscillator recorded readings of 3.0 or higher during 22 of 25 consecutive trading days ending January 5. This January reading confirmed the new highs seen at that time.

The NYSE volume is yet to record a 90% up day this year but did score a 90% down-volume day on April 12, February 13, and December 20, 2023. In short, it has been a strong advance in terms of points, but weak in terms of upside buying pressure.

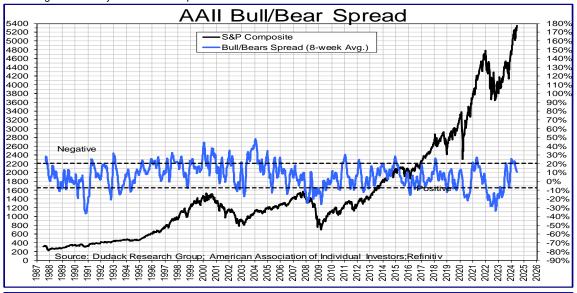

If the rally which began in October actually represents a new bull market advance, it should have also included several extreme overbought readings of 5.0 or better, which are typical of the first stage of a major advance. This has been absent and represents, to date, a lack of persistent buying pressure.

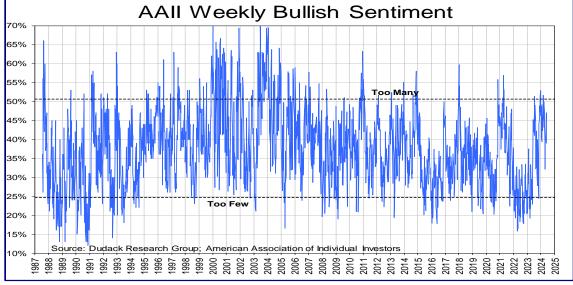

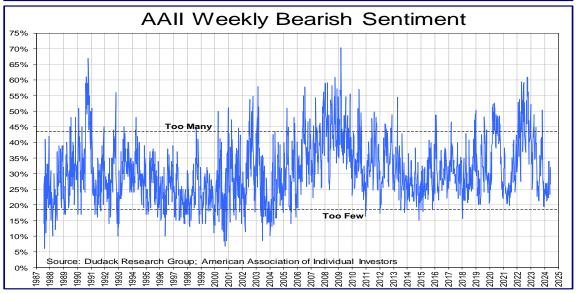

The 10-day average of daily new highs is 178 and new lows are 75. This combination of new highs above 100 and new lows below 100 is positive. The NYSE advance/decline line made a new record high on May 20, 2024, is positive, and confirms the new highs in the popular at that time. With the exception of May 28<sup>th</sup> and May 31<sup>st</sup>, daily volume has been weak for most of the last three weeks, and largely trailing behind the 10-day average for most of the recent advance.

Last week's AAII readings showed bullishness unchanged at 39.0%, keeping bullishness above average, and bearishness rose 5.3% to 32.0%, carrying bearishness above the average of 31%. On December 13, 2023, bearishness was 19.6%, its lowest level since the January 3, 2018 reading of 15.6% when bullishness was also high and above the 50% benchmark at 51.3%. The 8-week bull/bear fell to 10.4% and remains neutral after generating 7 consecutive weeks in negative territory in March and April.

#### **Regulation AC Analyst Certification**

I, Gail Dudack, hereby certify that all the views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is, or will be, directly or indirectly related to the specific views contained in this report.

#### IMPORTANT DISCLOSURES

#### **RATINGS DEFINITIONS:**

#### Sectors/Industries:

"Overweight": Overweight relative to S&P Index weighting

"Neutral": Neutral relative to S&P Index weighting

"Underweight": Underweight relative to S&P Index weighting

#### Other Disclosures

This report has been written without regard for the specific investment objectives, financial situation, or particular needs of any specific recipient, and should not be regarded by recipients as a substitute for the exercise of their own judgment. The report is published solely for informational purposes and is not to be construed as a solicitation or an offer to buy or sell securities or related financial instruments. The securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. The report is based on information obtained from sources believed to be reliable, but is not guaranteed to be accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the report. Any opinions expressed in this report are subject to change without notice and the Dudack Research Group division of Wellington Shields & Co. LLC. (DRG/Wellington) is under no obligation to update or keep current the information contained herein. Options, derivative products, and futures are not suitable for all investors, and trading in these instruments is considered risky. Past performance is not necessarily indicative of future results, and yield from securities, if any, may fluctuate as a security's price or value changes. Accordingly, an investor may receive back less than originally invested. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument mentioned in this report.

DRG/Wellington relies on information barriers, such as "Chinese Walls," to control the flow of information from one or more areas of DRG/Wellington into other areas, units, divisions, groups, or affiliates. DRG/Wellington accepts no liability whatsoever for any loss or damage of any kind arising out of the use of all or any part of this report.

The content of this report is aimed solely at institutional investors and investment professionals. To the extent communicated in the U.K., this report is intended for distribution only to (and is directed only at) investment professionals and high net worth companies and other businesses of the type set out in Articles 19 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001. This report is not directed at any other U.K. persons and should not be acted upon by any other U.K. person. Moreover, the content of this report has not been approved by an authorized person in accordance with the rules of the U.K. Financial Services Authority, approval of which is required (unless an exemption applies) by Section 21 of the Financial Services and Markets Act 2000.
